

E-Commerce Sales & Customer Insights Dashboard

E-Commerce Sales & Customer Insights Dashboard

This dashboard analyzes customer behavior, product performance, and order trends on a structured e-commerce database.

SECTION 1: CUSTOMER ANALYSIS

Customers by State
This analysis identifies geographic distribution of customers.

This problem helps identify the geographical distribution of customers. By grouping customers based on their state, we can see which regions have more users.

Active Customers (Repeat Buyers)
Customers who placed more than one order are considered active.

This problem focuses on customer behavior. Instead of just counting customers, we analyze how frequently they purchase. Customers with multiple orders are considered loyal or active customers.

Total Customers

Determine the total number of customers registered in the system.

12,435

SECTION 2: ORDER ANALYSIS

Orders by Status
Distribution of orders based on their current status.

Orders can have different statuses like completed, pending, cancelled. This problem groups orders based on their order_status to understand how many fall into each category.

Total Orders

Total number of orders placed on the platform.

68.88K

Orders per Customer
Measures customer engagement based on number of orders.

This problem measures customer engagement by counting the number of orders per customer. It helps differentiate between one-time buyers and frequent users.

SECTION 3: PRODUCT ANALYSIS

Top Expensive Products

Key insights from the chart:

SOLE P85 Elliptical is the most expensive product at \$1,999.99
SOLE F85 Treadmill and SOLE PS5 Treadmill are tied at \$1,799.99 each

Total Products

Total number of products available in the system.

1.35K

Product Distribution by Category

SECTION 4: BUSINESS STRUCTURE ANALYSIS

Category by Department

Orders Over Time
